INVITATION TO CONTRIBUTE TO THE FIRST MAJOR PEER-REVIEWED JOURNAL INVESTIGATING THE IMPLICATIONS OF THE INTERNET FOR PUBLIC POLICY:

Policy and Internet – Call for Papers

The Oxford Internet Institute (OII), the Policy Studies Organization (PSO), and Berkeley Electronic Press are proud to announce *Policy and Internet*, the first major peer-reviewed multi-disciplinary journal investigating the implications of the Internet and associated technologies for public policy.

The Internet is now embedded in social, economic and political life, bringing with it new practices, norms and structures. The societal shift enabled by the Internet enables new kinds of policy innovation and creativity: and raises new challenges and risks for policy-making and analysis. It requires rigorous empirical investigation, theoretical development and methodological innovation across academic disciplines. *Policy and Internet* will become the premier arena for advancing policy research and shaping the policy agenda in the digital era.

Policy and Internet invites papers reporting world class research and scholarship on any aspect of the relationship between the Internet and public policy. The journal is fully multi-disciplinary in scope. Topics will range across policy sectors and regions of the world, including generalised, sectoral or country-specific policy effects.
