Digital Ethnography
Digital Social Research: Methods Options - Group A

Academic Year: 2016-17, Hilary Term
Day and time: Weeks 1-4, Wednesdays from 11:30-13:30
Location: TBC

Course Convenor
Eric T. Meyer, Professor of Social Informatics, eric.meyer@oii.ox.ac.uk, Tel. 287218
Isis Hjorth, Research Fellow, isis.hjorth@oii.ox.ac.uk, Tel. 612775

Background for Digital Ethnography
Analysis of qualitative data gathered during the course of social research and the Internet requires both a set of specialized skills and an understanding of the philosophical underpinnings of qualitative approaches to social research. Ethnographic approaches to research in particular are often employed in the study of ICTs, particularly since they are well suited to the study of leading-edge developments. They also provide a means for complementing more quantitative studies through the collection of in-depth and contextualized observations.

This module will: 1) provide an overview of the ethnographic tradition; 2) explore the new opportunities and challenges the Internet has presented for those interested in carrying out ethnography; 3) examine the more practical aspects of how to go about an ethnographic study; 4) discuss novel methods that are being used to analyse web based data and how using these methods may actually be changing what ethnography originally set out to be; and 5) explore some of the ethical considerations that arise in online ethnography.

This course will have a strong theoretical basis throughout, and is designed to provide students with the knowledge and skills to carry out qualitative data analysis of a variety of kinds of data (e.g. text, photos, videos) collected from both online and offline settings. Students will gain familiarity with techniques for using a variety of Internet-related methods, and will understand their challenges.

Course Objectives and Outcomes
This course is designed to give students experience both collecting and analysing qualitative data as part of ethnographic research, and to give them a conceptual understanding of the reasons for using ethnographic approaches, the limits of the methods they will be using, and the opportunities and challenges unique to qualitative social research methods and the Internet.

Each week, students will develop their conceptual understanding and analysis skills via the discussion of key academic texts and through working with authentic qualitative data. Starting in week 1, students will be required to start developing and conducting their own small case study using different kinds of qualitative data and participant observation methods.

08/01/2016
At the end of the course students will be able to:

- Understand the strengths and limitations of engaging in participant observation of digitally mediated communities
- Identify, gather, manage, and analyse multiple types of qualitative data to support ethnographic investigation
- Understand the ethical considerations unique to participatory qualitative methods

Note that students taking this course who wish to learn advanced techniques for coding and analysing the qualitative data they will gather are encouraged to take the CAQDAS methods module in the second half of Hilary Term.

Teaching Arrangements
The course will be taught during the first half of Hilary term in four weekly classes, consisting of a mix of lectures, hands-on work, student participation, and seminar discussion.

Each student will be required to submit formative work throughout the term.

- **Every week** all students should submit two questions raised by the readings for the week via Plato. These questions should be a combination of critical questions on the themes of the reading and questions about anything you don’t understand, either in the readings or in the course more generally. These should be submitted by **noon on Monday** preceding the class.
- Additionally, one specific formative assignment is indicated in the weekly reading lists, and is **due by noon on the Monday** preceding the class. This formative assignment should be submitted via Plato.

**Note**
Students should note that over the course of the year, small changes may be made to the content, dates or teaching arrangements set out in this reading list, at the course provider's discretion. These changes will be communicated to students directly and will be noted on the internal course information website.

Summative Assessment
The course will be formally assessed by means of a final report of approximately 2,500 words on the case study project each student has carried out during the course. This report will focus on a short but critical analysis of related literature, reflexive discussion of the fieldwork methods used including their strengths and limitations, a short presentation of findings and suggestions for future work suggested by the project. Additional details about the form, content, and structure of the report will be discussed during class sessions.

The report is due on **Friday of Hilary Term Week 5 by 12:00pm**, and should be submitted via Weblearn. The report should follow the normal OII formatting guidelines.

Please note that the assessment for this course is different for DPhil students who would like to take the course for credit. DPhil students should speak to the course convenors for details.

Submission of Summative Assignments
The summative assignment for this course is due on Friday of Hilary Term Week 5 by 12.00pm and should be submitted electronically via the Assignment Submission WebLearn Site. The assignment should also be submitted electronically by 5:00 pm on the same day to teaching@oii.ox.ac.uk. If anything goes wrong with your submission, email teaching@oii.ox.ac.uk immediately. In cases where a technical fault that is later determined to be a fault of the WebLearn system (and not a fault of your computer) prevents your submitting the assessment on time, having a time stamped email

08/01/2016
message will help the Proctors determine if your assessment will be accepted. Please note that you should not 08/01/2016 wait until the last minute to submit materials since WebLearn can run slowly at peak submission times and this is not considered a technical fault.

Full instructions on using WebLearn for electronic submissions can be found on Plato under General Information. There is also an FAQ page on the Assignment Submission WebLearn Site.

Please note that work submitted after the deadline will be processed in the standard manner and, in addition, the late submission will be reported to the Proctors' Office. If a student is concerned that they will not meet the deadline they must contact their college office or examinations school for advice. For details on the regulations for late and non-submissions please refer to the Proctors website at https://www.admin.ox.ac.uk/proctors/examinations/candidates/.

Any student failing this assessment will need to follow the rules set out in the OII Examining Conventions regarding re-submitting failed work.

**Topics**
1. Introduction to Ethnography On/Offline
2. Entrée and Access to Communities
3. Participant observation and other sources of data: striking the right balance
4. Writing Culture

Key to Readings and Assignments

A reading list is given below for each class. Those items marked with an asterisk (*) are essential reading and MUST be read by all students in preparation for the class. Items which are not marked with an asterisk are additional suggested readings which can be consulted by students with relevant interests.

All assignments shown below should be prepared in advance of the class session for which they are assigned, and submitted to the course convenor via Plato by the deadlines.

Week 1: Introduction to Ethnography On/Offline

Ethnographic approaches to research are often employed in the study of ICTs, particularly since they are well suited to the study of leading-edge developments. They also provide a means for complementing more quantitative survey research and experimental studies through the collection of more in-depth and contextualized observations.

This session will: 1) provide a brief overview of the ethnographic tradition; 2) explore the new opportunities and challenges the Internet has presented for those interested in carrying out ethnography; 3) begin to introduce some of the ethical considerations that arise in online ethnography (a theme that will continue throughout the course).

Readings

* Horst, Heather Miller, Daniel
  Chapter 1: The Digital and the Human: A Prospectus for Digital Anthropology

* Kozinets, Robert V.
  Chapter 2: Networked Sociality
  Chapter 3: Researching Networked Sociality

* Hine, Christine
  Chapter 2: The E3 Internet: The Embedded, Embodied, Everyday Internet (pp.19-54)

Burrell, J.
  The Field Site as a Network: A Strategy for Locating Ethnographic Research. Field Methods 21(2): 181-199. Available online: http://fmx.sagepub.com/content/21/2/181

Marcus, George E.

Creswell, John
  Chapter 4: Five Qualitative Approaches in Inquiry

Markham, Annette N. Baym, Nancy K.

08/01/2016
Assignment

Prior to the course starting, students should start thinking of an online community they would like to study. They should bring these ideas into class to discuss. Each student should be prepared to describe the community, explain why the community merits investigation, and outline some of the challenges the study might present.

Week 2: Entrée and Access to Communities

Gaining access to communities is a question that has been at the heart of ethnography since its founding, and the online environment adds new dimensions of challenges for digital ethnographers. Questions of researcher identity, lurking as method, becoming an insider, and many others face the digital ethnographer, and we will discuss how others have negotiated these challenges, and what students can do to gain access to the communities they are working with.

Readings

  Chapter 5: Planning and Preparation

  Prolog, and chapters 1 & 2

  Chapter 3: Ethnographic Strategies for the Embedded, Embodied, Everyday Internet (pp. 55-88)

Formative Assignment (Approximately 1000 words + CUREC)
In this course, each student will design and conduct a small study related to the Internet that uses different sources of qualitative data, including participant observation. For the assignment, write a short paper in which you describe a community for which you have access to a variety of types of qualitative data, identify the boundaries for the case, and describe the types of qualitative evidence you will be able to collect. It is important that you choose a real case with data to which you can gain access, because you will be collecting these data and analysing them throughout the rest of the course, and writing up your experience and results in the summative final report. Also, you must fill out a CUREC form for your project.

Week 3: Participant observation: striking the right balance
Once one has access to a community, what evidence can the ethnographer collect to bring together a holistic picture of their research topic? In this session, students will be introduced to the range of data they could construct / collect as a qualitative researcher (e.g. text, audio and visual data) both on and offline; and discuss ideas about how to design and conduct a case study using a range of qualitative methods. This session will also build on ideas from the core research methods course, particularly following on from the case study session. Students will also be introduced to a range of techniques and software for dealing with qualitative data in all its forms (e.g. field notes, photographs, audio or video recordings, documents of varying types, archival data). These will include manual methods for organizing digital files to software-based strategies.

Chapter 3: Designing a Qualitative Study  
Chapter 7: Data Collection |

**Week 4: Writing Culture**

An important part of ethnographic inquiry is the ability to write an engaging and believable narrative about the research. Bringing together multiple sources of evidence to develop coherent conclusions and communicating findings appropriately are two key challenges of qualitative research. Drawing on academic literature, this session will examine how the various kinds of data analysed in the course can be used together to provide a coherent analysis of a study, considering issues of triangulation and crystallisation. How to disseminate the findings in an appropriate way (e.g. how to use quotes, different academic styles of writing up, etc.) will also be explored via in-class analysis of examples in academic journals.

In this session students will also consider the nature of validity and reliability in qualitative research, the ways in which qualitative researchers try to address questions of rigour in their work, and then try to apply some of these ideas to the analysis of their own study. This session will build upon ideas presented in the core research methods course, and will include working with data students have begun to collect.
